Strategies for Parents to Use with Young Children with ASD

While every child with autism spectrum disorder (ASD) is unique, there are several strategies that can be used by all parents of children with ASD in their home to help manage their child's behavior and help their entire family establish daily routines that can prevent many difficult behaviors. This workshop will focus on an overview of some Applied Behavior Analysis (ABA) strategies that are user-friendly and can be implemented immediately with young children with ASD.

Sonja de Boer is a Board Certified Behavior Analyst and obtained her Ph.D. in special education and psychology and research in education, with an emphasis on early intervention for children with Autism Spectrum Disorders (ASD). She has 25 years of experience working in early childhood special education, early intervention services, Applied Behavior Analysis (ABA), with students with disabilities, and specifically children with ASD.
